AccuFund Introduces the Employee Portal, a Client Interface for Organizational Communications and Employee Self-Service

New Web Interface in the AccuFund Accounting Suite Allows Organizations to Provide Internal News and Enable Employees to View and Change Personal Information

Needham, MA – June 10, 2011 – AccuFund, Inc., provider of financial reporting and accounting software for non-profit, municipal and government organizations, today introduced the Employee Portal, a new web-based component in the AccuFund Accounting Suite. The Employee Portal is a customizable interface that allows organizations to provide employee access to organizational news and personal information. It can be utilized through an internal network or over the web via an SSL connection.

With the Employee Portal, employees can view the organization's public news and information and login to view private news and view or change their personal and employment information. The Employee Portal can be configured to communicate information and events organization-wide or to individual departments or employees. Whenever an employee logs on to their Employee Portal page, they will see only the information that is intended specifically for them and their department. PDFs of documents such as health enrollment forms can be attached for printing or download.

“The Employee Portal is part of our continuing objective to help customers facilitate important, yet often time-consuming tasks and make their overall work experience much smoother,” stated Peter Stam, president of AccuFund, Inc. “With the Employee Portal, organizations can empower employees to see as much information as they want them to see. They can also better manage individual employee records by allowing employees to update their own data to the extent that managers want to allow.”

Modules are added to the Employee Portal that enable employees to view, update and print their personal and employment information. The Employee Self-Service module, which is available with this release of the Employee Portal, allows employees to view and print their pay stubs and to view and change their address, phone numbers, contacts in the organization, and withholding and benefits information. The employer can determine specifically which information can be

viewed, changed and require change approval. Time periods can be designated when it is necessary to limit the availability of information or the opportunity to make changes.

Customization of the look and feel of the Employee Portal interface is also available. Organizations can incorporate their logos and a specific theme, color scheme, button style or images. Customization of the interface as well as the functionality provided by the Employee Portal is controlled through the AccuFund Accounting Suite.

The Employee Portal is installed on a computer within an organization's network and is a self-contained web server application requiring no additional web server software. SSL security is included to insure secure communication of the employees' information.

Availability

The AccuFund Employee Portal is available with both the Standard and Professional editions of the AccuFund Accounting Suite. The cost is \$ 1,295 and up based on the number of active employees.

About AccuFund

AccuFund, Inc. provides scalable accounting software systems to nonprofit organizations and government agencies. The AccuFund Accounting Suite fulfills the market's need for an accounting solution that is more sophisticated than off-the-shelf products, yet much less expensive, complex and difficult to use than the higher end offerings. AccuFund's products are available exclusively through Value Added Resellers (VARs) located throughout the United States. The VARs provide AccuFund's customers with cost-effective onsite training and installation assistance.
