AccuFund Introduces New User Interface in Latest Upgrade of the AccuFund Accounting Suite

Version 6.01 Offers Several New Core System Capabilities Adding Greater Ease of Use

Needham, MA – December 12, 2017 – AccuFund, Inc., provider of financial reporting and accounting software for nonprofit, municipal and government organizations, today announced the availability of Version 6.01 of the AccuFund Accounting Suite. With this latest release, AccuFund introduces a completely new user interface with a simpler, standardized design. Fonts are larger and easier to read, icons in the toolbar are simplified and all windows have a consistent look and feel. Version 6.01 also features several new capabilities in the Core system of the AccuFund Accounting Suite.

“Our number one goal with every upgrade is to provide greater convenience, ease-of-use and flexibility for our users,” stated Peter Stam, president of AccuFund, Inc. “The Version 6.01 interface is modern, containing the icons users expect in their applications. We’ve brought it in line with the Windows 10 standard, providing a look users are very familiar with while also delivering simpler navigation to further enhance the system’s usability.”

The most noticeable new feature with the Version 6.01 interface is the color themes. The system has 25 different color combinations that each user can choose from for their individual color scheme. Changing the theme will immediately change the colors used in any open window. The theme colors are stored by database, allowing users to have a different theme color for each database.

Version 6.01 also offers the following capabilities in the Core system of the AccuFund Accounting Suite:

Retain User Preferences – Any user settings such as theme color, password, account information, etc. are now stored in the database rather than on the workstation, allowing them to be retained and attached to the user when they move to another workstation or device.

Reconfigure Data Entry Grids – Users can reconfigure the way they do data entry, easily moving objects around on the grid whether they are in the browser or data entry area. Grids can be copied to a clipboard for transfer directly to a spreadsheet and all new settings are retained.

Filter Data in Browse Windows – Browse default settings have been standardized to show the typically desired data as the default, making the system more responsive. A Filter button in each browse window opens a window where new criteria can be entered to set new values that will be saved for the next time the user opens the browse window. Users can return to the default set of values at any time by clicking the Reset button in the Filter window.

Other new Core system features in Version 6.01 of the AccuFund Accounting Suite include the ability to resize navigation panes and to add, remove and rearrange columns in any grid that is within any Update window. Version 6.01 also supports file streaming, allowing images to be stored outside the database so the database size is smaller.

Version 6.01 of the AccuFund Accounting Suite also offers new features and enhancements to the following modules: Accounts Payable, Accounts Receivable, Cash Receipts, Client Accounting, Employee Portal, Financial Reports, General Ledger, Grants Management, Human Resources, Payment Portal, Payroll, Representative Payee, Requisitions and Task Scheduler.

Availability

The AccuFund Accounting Suite Version 6.01 is available licensed both Cloud (SaaS) and on-premise, in Standard and Professional editions adding additional security.

About AccuFund

AccuFund, Inc. is a nonprofit financial improvement systems specialist. AccuFund uses award-winning financial software, consulting services and industry best practices to help organizations streamline processes, improve efficiency and lower costs. Their nonprofit financial solutions are available on-premise or cloud-based.
